

## Talon Simulations Integrates HTC Vive With Motion Simulator and Becomes Official Value Added Reseller

19 May 2017

Talon Simulations is a provider of virtual reality simulators for the entertainment and training industries. Their flagship product is the Atomic A3 Full Motion Simulator, which has been used in various arcades, training centers, as well as several custom branded experiences for companies such as Nissan, Toyota, and NASA.

Integrating virtual reality headsets with the platform is the company's specialty so it was only natural to figure out a way to allow the HTC Vive to work with a motion base. The

limiting factor was the two tracking cameras that are required for the headset. These are supposed to be mounted to a wall or on tripods to provide positional tracking, allowing you to move around in the virtual environment. When you do this on a motion simulator, however, you would get thrown outside of the car or roller coaster that you are riding because it thinks you are walking around.

This is why it was necessary to create software that would allow the motion of the simulator to be cancelled out of the headset so the simulator could move around and have the visuals remain static.

With this tool now in hand, HTC was more than happy to bring Talon on board as a value-added reseller to package the Vive

Business Edition with their simulators for customers looking for the latest in virtual reality technology.

### About HTC

HTC goes where others haven't thought to. Breaking down barriers and creating industry firsts is a large part of their history, which is why HTC has become synonymous with innovation, engineering breakthroughs, and designing the future of human communications.

### About Talon Simulations

Located in Orlando, FL, Talon Simulations, LLC is a small business specializing in hardware/software integration of virtual reality vehicle simulations. They have a passion to create the most immersive and
